

Hook Lift

Collection System

The Instant Waste Management hook lift system has been designed to cater for larger volume, bulky, and non-compactable waste. These bins are ideal for the commercial, manufacturing, and industrial applications where there is a large volume of waste to be disposed. The use of larger bins provides a cost-effective waste management solution that saves on transport costs.

- Perfect for large generators of commercial and industrial waste or light construction and demolition waste.
- Bin sizes range from 10m³ to 30m³.
- Larger rear doors provide easy and direct access for bobcats and forklifts for bulk waste disposal.
- Waste streams can also be deposited directly into the top of the bin and forklifts for bulk waste disposal.
- Stationary or transportable compactors can be provided on-site to reduce costs and maintenance on high volumes of waste.
- Waste reports can be provided to ensure your waste targets are met and environmental accreditations are achieved.
- Our Material Recovery Facility (MRF) will process your mix waste streams and extract materials to recycle and repurpose, thereby diverting from landfill.

Vehicle Specifications

Overall length	Up to 9m
Overall width	2.5m
Height (travel)	Up to 4.3m
Height (in operation)	Up to 8.5m
Weight (vehicle only)	13.0t
Weight (payload)	14.5t
Turning circle	22.6m

Bin Specifications

Capacity	10m3	12m3	20m3	30m3
Depth	5.2m	5.2m	5.2m	6.1m
Width	2.4m	2.4m	2.4m	2.4m
Height	1.0m (2)	1.2m (2)	1.9m	2.5m

Notes

1. The above measurements should be treated as approximates only and have been based on the outside bin measurements of our standard bin range. There may be slight fluctuations within our range of stock.
2. The height of these bins incorporate castors that form part of the bin.

Why Choose Us?

Instant Waste Management is a reliable and trustworthy waste partner. Our experience enables us to cater for all waste projects quickly and efficiently. We provide an extensive fleet of vehicles and a comprehensive range of bins, as well as utilising the latest collection and waste management processes. Our state-of-the-art Material Recovery Facility (MRF) helps customers reduce, reuse, and recycle materials for a total integrated waste solution.

Our Commitment

We can customise packages to meet all waste stream requirements. We target cost efficiency, environmental optimisation, and resource to provide the best available customer service; all of which leads to a longer term and mutually successful relationships.

Sustainable Waste Management

Our approach is designed to deliver key benefits to you - starting with waste assessments through to the collection, separation, and recycling of all your waste streams. Our technology, experience and operational techniques ensure the minimum amount of waste is produced, diverting it away from landfill, lowering your bottom line and creating a positive environmental impact. Waste matters to us. With our help, you'll meet all your sustainable commitments for the safe and effective management of waste. Make Instant Waste Management your waste partner of choice.
